

System 3

PREMIUM FILTER CARTRIDGE SET

OnCore™ System 3 filter cartridges are engineered for exceptional water clarity, durability, and ease of maintenance for residential swimming pools and spas. Designed for true System 3 compatibility, these high-capacity cartridges maximize filtration efficiency while minimizing service time and water waste.

Driven by OnCore's commitment to quality, value, and service, our **System 3 cartridges** deliver reliable, high-performance filtration at a competitive price. Built with commercial-grade flat bond media and a true dual-cartridge design, we do not use any adapter plates or spacers, ensuring a true replacement unlike some alternatives on the market.

System 3 filtration uses a dual-cartridge design within a modular tank for broad debris capture, including:

- **Coarse filtration** – larger debris (leaves, hair)
- **Fine filtration** – smaller particles (dirt, algae)

This staged approach delivers:

- **Exceptional water clarity**
- **Extended cleaning cycles**
- **High flow performance**

TRUE TWO-CARTRIDGE DESIGN

- *Exact System 3 Fit*
- *No Adapters or Manifold Plate Required*

FLAT BOND FILTRATION MEDIA

- *Fine-denier, Polyester*
- *Commercial Grade Industry Standard*

STAGGERED-SUPPORT OPEN FLOW CORES

- *Optimized Flow*
- *Engineered Injection Molded Strength*

QUICK CLEANING DESIGN

- *Fast Rinse*
- *Easy Maintenance*
- *No Backwash Required*

Our unique Open-Flow Cores feature injection-molded, staggered support cores that maximize water flow across the filtration media for enhanced efficiency and debris capture. Engineered for strength under pressure, these cores work in harmony across both inner and outer cartridges to deliver balanced, high-performance filtration.

Made with fine-denier, flat bond filtration media, this commercial-grade, industry standard filtration fabric is manufactured on the latest-generation non-woven lines using advanced spun-bond technology for exceptionally even fiber distribution. Its enhanced open-weave structure slows filter cake formation, minimizes clogging, and extends service intervals with fewer cleanings, delivering reliable performance in demanding commercial filtration applications.
